

GOLD CHIP THERMISTOR GA10K3CG1231

Description

TE Connectivity offers a comprehensive range of Gold terminated leadless NTC chip thermistors for today's hybrid microelectronics needs. With metallization on top and bottom surfaces, attachment to hybrid, IC or PC circuits is accomplished using industry standard die attach and wire bonding techniques. Chips may be soldered or bonded with conductive epoxy to board termination points where space is at a premium. Typical square-chip sizes range from 0.35 mm to 1.2 mm depending on the preferred ceramic system and nominal ohmic resistance. MTTF reliability information is provided for the complete range of gold chip products for customer selection and design-in. Gold terminated NTC thermistors are supplied in "waffle" packs for protection and ease of customer handling.

Specifications

- 10K Ohms Resistance @ +25°C
- $\pm 1\%$ Resistance Tolerance @ +25°C
- Rapid Time Response
- $\text{Beta}_{25/85} = 3976 \pm 1.0 \%$

Features

- Gold electrodes suitable for wire bonding
- Mount directly to substrate for fast time-response
- Temperature range -40°C to +125°C
- High stability performance with additional aging steps
- Delivers advanced electro-ceramic materials with fine grained microstructure
- Packed in waffle trays

Applications

- WDM (Wavelength Division Multiplexing) for advanced frequency control in communications systems and wireless applications
- Thermopile sensors for thermal radiation recognition and infrared sensing
- Thermal protection of sensitive circuits
- Hybrid circuit temperature compensation
- Localized temperature sensing
- Laser diode modules

<p>Wire Bond Strength</p>	<p>Wire Bond Strength testing conducted as per MIL-STD-883, Test Method 2011, Section 3.1.3, Test Condition D - Wire pull (double bond).</p> <p>25μm Au wire bonded to top electrode of NTC Gold Chip using ball bonding process. Wire Bond Strength testing performed using a Dage Series 4000 Bond tester.</p>	<p>Test specimens exceeded the MIL-STD-883, Method 2011, minimum strength of 3.00g.</p> <p>Result = Pass</p>
<p>Die Shear Strength</p>	<p>Die Shear Strength testing conducted to assess the integrity of the die-to-bonding pad interface as per MIL-STD-883, Test Method 2019, Section 3.2.1 Epoxy Attach & Figure 2019-4 (Die Shear Strength Criteria).</p> <p>Die attach material is silver loaded epoxy (Epo-Tek H35-175MPLV). Die Shear testing performed using a Dage Series 4000 Bond tester.</p>	<p>Test specimens exceeded the MIL-STD-883, Method 2019, minimum strength of 229.28g.</p> <p>Result = Pass</p>

Reliability and Lifetime:

The Gold Chip Thermistor operating lifetime has been calculated using accelerated life test principles. For the tests, the specimens were mounted in CerDIP packages using a silver filled epoxy to form the mechanical, thermal and electrical bond to the substrate. A gold wire bond was used to connect to the top electrode. The thermistors were subjected to unpowered storage at select temperatures between +50°C and +125°C. Periodic calibrations were taken to understand drift in resistance over time. Based on this data, a lifetime prediction model was applied to estimate Mean Time To Failure (MTTF) for operation at typical application temperatures. The criteria for failure was drift in resistance values at a reference temperature of +25°C with the model being applied for different allowable percentage drift values, as indicated below:

GOLD CHIP THERMISTOR GA10K3CG1231

Product packaging – waffle tray H20-021-12 -62C02

Pocket Locations

- M = $8.00 \pm 0.13\text{mm}$
- M1 = $8.00 \pm 0.13\text{mm}$
- M2 = $1.83 \pm 0.13\text{mm}$
- M3 = $1.83 \pm 0.13\text{mm}$
- Array = 20x20 (400)

SECTION A-A

Pocket Details

- X = 0.56mm pocket size
- Y = 0.56mm pocket size
- Z = 0.31mm pocket depth
- A = $14^\circ \pm 1/2^\circ$ pocket draft angle

No cross slots

Overall Tray Size

- Size = $50.67 \pm 0.25\text{mm}$
- Height = $3.94 + 0.08\text{mm} - 0.13\text{mm}$
- Flatness = 0.30mm

GOLD CHIP THERMISTOR GA10K3CG1231

Mounting recommendations using Au Sn eutectic solders

Recommended eutectic gold-tin alloy is 80%Au/20%Sn with a melt point of +280°C (556°F). High thermal conductivity of 80%Au/20%Sn solders increases the responsiveness of the NTC gold thermistor.

- Max ramp rate of 40°C per minute to a preheat temperature of +180°C to +200°C
- Preheat dwell period of 90 – 150 seconds @ +180°C to +200°C
- Maximum time above the eutectic temperature of +280°C for 45 seconds with a bell-shaped profile — no plateau at peak temperature of +300°C to +305°C
- Maximum time above peak temperature of +300°C for 8 seconds.
- Max cooling rate of 40°C per minute or less to prevent thermal stress on the component.
- Times indicated are based on the NTC surface temperature.

Excessive soldering temperatures and durations can cause leaching of the termination resulting in changes to the electrical characteristics of the NTC caused by reduction in adherence strength. The recommended profile is provided as a guideline only and it is recommended the customer validates the suitability for the intended purpose.
