1.1 Content 内容

TE Connectivity's HVP-HD1000 is designed to meet LV215 specifications (vibration refers to ISO16750-3 while salt spray refers to VDA233-102), there are 35mm²、50mm²、70 mm² three kinds of metric wire size (acc. to ISO 6722-1 class D, ISO 19642-9 class D).

With a 180° cable outlet incorporates the connector system 10mm power contacts and an integrated High Voltage Interlock (HVIL) System. The HVP-HD1000 header can be divided into two parts: 90Deg and 180Deg. All of them have 1POS、2POS、3POS, equipped with 12 different keying or polarizing configurations. It incorporates 360° conductive EMI shields to reduce radiated emissions in the application. The housings are molded in orange to denote a high voltage system.

C	Contact overlap – Shield contact	屏蔽接触	$\geq 1\text{mm}$

5.4 Strain relief 应力释放

System is validated with strain relief at 40mm. Each application has to be evaluated independently with regards to the external influences on the system. Having strain relief, which moves with the connector body, close to the end of the connector will have a positive influence on the performance of the connector. Have strain relief further from the end of the connector or that moves independent of the connector body will have a negative influence on the performance of the connectors.

系统通过 40mm 的应变消除进行验证。每个应用都必须独立评估对系统的外部影响。随连接器主体移动的压力释放，接近连接器的末端将对连接器的性能产生积极影响。应变释放离连接器的末端更远或者连接器主体晃动将对连接器的性能产生负面影响。
