

1. Introduction

1.1 Testing was performed on the LGA1207 socket to determine if it meets the requirements of product specification 108-78375

1.2 Scope

This report covers the electrical, mechanical and environmental performance requirements of the LGA1207 socket.

1.3 Product description

LGA1207 socket has arrayed contacts and solder to printed circuit board (PCB). The socket is used by compressing its contacts to the arrayed CPU land in the normal direction of the PCB. The CPU lands are arrayed with same grid pitch to the socket and has gold plating finish on the surface. LGA1207 socket is actuated by the lever and generates required compression force by the back plate attach to the bottom side of the PCB and the socket actuation mechanism.

1.4 Conclusion

1.2 This test report confirmed that Tyco socket F 1207 satisfied the requirements of the product specification of 108-78375 Rev.A

1.5 Test samples

Samples were taken randomly from current production. The following samples were used :

Part Number	Description
0-1871554-1	LF-LGA1207 socket (Lead free) Right / U-lever shape
0-1871554-2	Leaded-LGA1207 socket (Leaded) Right / U-lever shape

Fig. 1

2. Test Contents

No.	Test Items	Requirements	Judgement
2.1	Examination of product	Visual Inspection No physical damage	Acceptable
Electrical Requirements			
2.2	Termination resistance (Low level)	20 mΩ Max. (Maximum per contact) *1	Acceptable
2.3	Dielectric withstanding voltage	650VACs, 1 minute No abnormality allowed. Current leakage : 5mA Max.	Acceptable
2.4	Insulation resistance	Impressed voltage 100 VDC. 1000MΩ Min.	Acceptable
2.5	Package mating operation force of lever	Operation speed: 100mm/min. Measure the vertical force required to lock the lever by loading at the tip of the lever. Operation force 5kgf Max.	Acceptable

Fig. 2 (to be continued)

2.6	Package unmating operation force of lever	Operation speed: 100mm/min. Measure the vertical force required to unlock the lever by loading at the tip of lever Operation force 5kgf Max.	Acceptable
-----	---	--	------------

Mechanical Requirements			
-------------------------	--	--	--

2.7	Durability (Repeated mating / unmating)	Operation speed:8 cycle/min. No. of cycles: Test group2: 50 cycles Test group5: 5 cycle 20 mΩ Max. (Maximum per contact) (Final) *1	Acceptable
-----	---	--	------------

2.8	Vibration, random.	Vibration Frequency: 10 to 500Hz (Random) Accelerated Velocity: 30.38 m/s ² (3.1G),rms. Vibration Direction: In each of 3 mutually perpendicular planes Duration: 45 minute each 100 mA applied. No electrical discontinuity greater than 1 μ sec. shall occur. 20 mΩ Max. (Maximum per contact) (Final) *1	Acceptable
-----	--------------------	--	------------

Fig. 2 (to be continued)

2.9	Physical shock	<p>Accelerated velocity: 490 m/s² (50 G) Waveform: Halfsine Duration: 11 m sec. Number of drops: 3 drops each to normal and reversed directions of X, Y and Z axes, totally 18 drops. No electrical discontinuity greater than 1 μ sec. shall occur. 20 mΩ Max. (Maximum per contact) (Final) *1</p>	Acceptable
-----	----------------	---	------------

Environmental Requirements

2.10	Cyclic humidity	<p>Test package mated socket with compressive load from heat sink 25°C - 85 °C, 90 - 95 % R.H. 1000 hour 20 mΩ Max (Maximum per contact) (Final) *1</p>	Acceptable
------	-----------------	---	------------

2.11	Temperature life (Heat aging)	<p>Test package mated socket with compressive load from heat sink 115 °C, Duration : 500 hours 20 mΩ Max. (Maximum per contact) (Final) *1</p>	Acceptable
------	-------------------------------	--	------------

Fig. 2 (to be continued)

2.12	Thermal shock	Test package mated socket with compressive load from heat sink -55 °C / 30 min., +110 °C / 30 min. (1cycle) No. of cycle : 10 cycles. (Test group2,3) 20 mΩ Max. (Maximum per contact) (Final) *1	Acceptable
2.13	Thermal cycling	Test package mated socket with compressive load from heat sink -55 °C / 20 min., +110 °C / 15 min. (1cycle) No. of cycle : 1000 cycles. (Test group1,10) 20 mΩ Max. (Maximum per contact) (Final) *1	Acceptable
2.14	Resistance to reflow soldering heat	Test socket on PCB. (Tin-Lead, Sn-Pb series) Solder ball part Pre-Heat 100~150 °C : 90~120sec Heat 200 °C min. : 60~90sec Heat Peak : 215±5 °C (Lead Free, Sn-Ag-Cu series) Solder ball part Pre-Heat 150~170 °C : 90 sec Min. Heat 225 °C min. : 60~90sec Heat Peak : 245±5 °C Other than solder ball : 260 ~ 265°C 10sec Max No physical damage.	Acceptable

*1 Bulk resistances of test CPU are subtracted.

Fig. 2 (End)

3. Test sequence

Test examination / Test sequence	Test Group									
	1(b)	2	3	4	5	6	7	8	9	10
Evaluated solder type (C)	LF&Pb	LF&Pb	LF	LF&Pb	LF	LF	LF	LF	LF&Pb	LF&Pb

Termination resistance (Low Level)	2,4,6,8	2,4,6,8		2,4	2,4,6,8	2,4			2,4	2,4
Dielectric withstanding voltage			2,5,8							
Insulation resistance			3,6,9							
Vibration (Low frequency)	5									
Physical shock	3									
Package mating operation force of lever								2		
Package unmating operation force of lever								3		
Durability (Repeated mate/unmating)		3			3					
Cyclic humidity		7	7							
Temperature life (Heat aging)				3						
Thermal shock		5	4							
Thermal cycling	7									3
Mix Gas					5,7					
Current rating						3				
Resistance to solvents									5	
Resistance to reflow soldering heat									3	
Contact retention force								4		
Solder ball shear force								5		
Gold plating thickness								6		
Nickel plating thickness								7		
Porosity								8		
Capacitance							2			
Inductance							3			
Cross talk							4			

2. Product qualification test sequence

(a) Numbers indicate sequence in which the tests are performed.

(b) Discontinuities shall not occur in this test group, during tests.

(c) Some tests of leaded was omitted because result of some test group is not affected by solder type. LF represents lead free products and Pb represents leaded products

4. Test result

Conditions	Measure Item	n	Unit	Results					Requirement	Judgement
