

COPPER AND ALUMINUM COMPRESSION LUGS

1-HOLE, 2-HOLE LUGS

Copper Compression Lugs

1-Hole, 2-Hole Lugs

TE's Copper Compression Terminal Connectors are ideal for secondary distribution up to 35 kV. Copper Compression Terminal Connectors are available to accommodate a range of cable sizes from #10 AWG to 1000 kcmil copper and offered in one- or two-hole terminal.

Use for terminating solid, compact and concentric stranded, class B conductors with either a standard or long barrel version and meet the requirements of UL 486.

Compression crimping forms the terminal and conductor into a strong, almost homogeneous unit, producing excellent conductivity, low temperature rise, and outstanding resistance to oxidation and corrosion. Compression of the terminal barrel creates a highly reliable connection that enables connector to perform well and at a lower temperature than the conductor during operation.

Key Features

- Easy to install with industry standard tooling
- Industry standard color coding system simplifies die selection
- One-piece, seamless construction from electrolytic tough pitch (ETP) copper for superior electrical performance and mechanical operation
- Closed barrel transition design for protection from moisture and contaminants
- Tin-plated for corrosion resistance and durability, and tempered for easy crimping

Copper Compression Lugs with Standard Barrel - One Hole

Dual Rated Aluminum Crimp Lugs

1-Hole, 2-Hole Lugs

TE's crimp type compression lugs are made from high conductivity aluminum. They are electro-tin plated to resist electrolytic corrosion. They are suitable in applications from 600 V to 35 kV. Compression lugs are available to accommodate a broad range of cable sizes from #1/0 AWG to 750 kmcil in both copper and aluminum material, in one- or two-hole configurations.

The barrels are chamfered, or chant edged, for easy entry of the conductor. Also, they are pre-filled with oxide inhibitor compound to prevent contamination. The long barrel length provides extra contact with the conductor, post crimping. Every barrel cap is color-coded to the proper die for error-free die selection. It prevents the inhibitor from getting contaminated before installation.

Key Features

- Easy to install with industry standard tooling
- Electro tin-plated for electrolytic corrosion resistance and durability
- Industry standard, color coded barrel ends and caps simplify die selection and prevent contamination of Oxide-Inhibiting compound
- For 600 V to 35 kV applications
- Suitable with both aluminum and copper conductors

Dual Rated Aluminum Crimp Lugs - One Hole
